

A HIGHLY EFFECTIVE TREATMENT OF ALGAE IN DOMESTIC PONDS & WATER FEATURES

WHAT IS PONDBRITE™?

PondBrite™ is a powerful and easy-to-use solution for keeping your pond or water feature clean and healthy. Specially designed for home use, it helps control and prevent the growth of algae, blue-green algae (cyanobacteria), and harmful bacteria in small water bodies such as backyard ponds, fountains, dugouts, lagoons, and water gardens.

SCAN FOR MORE INFO

When used as directed, PondBrite™ is safe for fish and other aquatic life, making it the ideal choice for maintaining beautiful, clear water in your decorative or functional water features.

CONTROLS BLUE-ALGAE

Blue-green algae can release toxins into the water when they break down. PondBrite™ works by treating the algae early using a low dose to stop blooms while allowing natural bacteria to break down the toxins safely. After treating a full algae bloom, wait 48 hours before letting people or pets use the water. Regular low-dose treatments help prevent future algae growth and keep your pond clean, clear, and safe. Contact your distributor if unsure about blue-green algae.

CLEAR WATER STARTS WITH SMARTER ALGAE CONTROL

HOW DOES PONDBRITE™ WORK IN FISH PONDS?

- ✓ Targets and controls algae and bacteria using low-dose ionic copper
- ✓ Safe for fish when water pH is 6.5+ and alkalinity is above 50 ppm
- ✓ Monitor during treatment to stay within the safe range (0.4 ppm copper level)
- ✓ Apply the first dose gradually over 2–3 days to allow fish to acclimate
- ✓ Contact us directly before treating water inhabited by fish
