

Dual-Purpose Protection for Healthier, More Productive Crops

What Is It

Harvest Miracle is a liquid fungicide approved for use on cannabis and other labelled crops. It effectively controls fungal diseases such as powdery mildew, helping plants stay healthy and vigorous. In addition to disease control, Harvest Miracle delivers bioavailable minerals that support plant strength and contribute to higher yields.

How Harvest Miracle Works

Harvest Miracle works through a combination of disease control and foliar nutrition:

Stops powdery mildew early
by preventing spores from taking hold

Keeps disease from spreading
to protect leaves and stems

Strengthens plants naturally
with minerals that support vigor

By reducing fungal stress and supporting plant strength, Harvest Miracle help crops use their energy for growth and development instead of fighting disease.

Application Guidelines

Method: Foliar spray or tank mixture

Coverage: Thoroughly coat all plant surfaces to form a protective layer

Timing: Apply in the early morning for best results

Key Benefits

1

Reliable powdery mildew control

2

Supports healthier plants

3

Contributes to higher yields

4

Flexible application options

5

Eco-conscious formulation

“

Harvest Miracle is remarkably effective in protecting cannabis plants from pathogens, decreasing microbial counts and reducing insect impact. Harvest Miracle delivers a significant boost to plant health.

Cameron Siu
CINO, Nelson Cannabis Science

”

“

We see Harvest Miracle as a product with enormous potential for the industry. The first results we've seen, including the feedback we've gotten from cultivators, have really exceeded our expectations. In terms of yield, health and quality, Harvest Miracle delivers a huge boost to all the key metrics that cultivators are looking for.

The Science of Growth

Harvest Miracle has been tested and analyzed by independent research organizations, including Nelson Cannabis Sciences Group in BC, and the University of Lethbridge in Alberta. Trials show that when fungal diseases such as powdery mildew were controlled:

Up to 25% higher yields were observed compared to untreated crops*

Significant reduction in microbial counts on plant surfaces was measured

Improved Crop Quality

By reducing fungal stress, plants maintained healthier tissues and overall vigor. Observed quality improvements include better appearance and maintenance of natural plant characteristics. Unlike other products, Harvest Miracle helps protect yield and quality without compromising taste, smell, or other crop attributes.

*Results may vary depending on crop, environment, disease pressure, and application practices.
