

Long-Term Water Clarity Management for Water Features and Decorative Ponds

OCION PX10

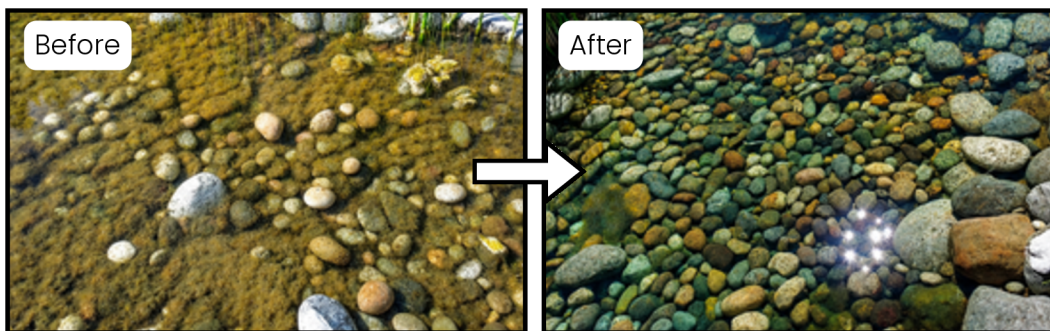

Restore Clarity. Reduce Maintenance. Protect Water Quality.

OCION PX10 kills algae and bacteria while improving the appearance and quality of water features. Its long-lasting formulation works throughout the water column to maintain cleaner, clearer water with reduced maintenance.

Key Benefits & Results

- ✓ Controls stubborn filamentous algae and pond scum
- ✓ Reduces harmful bacteria
- ✓ Improves water clarity and visual appearance
- ✓ Reduces suspended organic material that causes cloudiness
- ✓ Provides long-lasting protection between treatments
- ✓ Supports lower filtration and maintenance costs
- ✓ Simple application — no specialized equipment required

How OCION PX10 Works

Controls Algae & Bacteria

Helps manage biological growth that can impact water quality and appearance

Improves Water Clarity

Reduces suspended organic material that contributes to cloudy or unattractive water

Supports Easier Maintenance

Cleaner water can mean less cleaning, lower filtration demands, and improved overall performance

Delivers Lasting Results

Provides ongoing protection to help keep water features cleaner between treatments

Why It Matters

Large-scale and decorative water features are constantly exposed to sunlight, organic debris, and environmental nutrients. These conditions can quickly lead to algae growth, cloudiness, and increased maintenance demands.

OCION PX10 provides a proactive approach to water quality management, helping maintain cleaner, clearer water while reducing operational strain. The result is a more stable, visually consistent system that performs better with less intervention.

Certified to
NSF/ANSI/CAN 60

Clearer Water. Lower Maintenance. Lasting Results.
